REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Applicant's independent claims contain the limitations, taking claim 1 as exemplary, of an operand stack, a type memory, and a table storing the length of a particular operand type, wherein the type information stored in the type memory is used to determine the length of a particular operand stored in the operand stack. Prior art searched and found has taught operand stacks storing not only the instructions but the operand length as well. However, that art also teaches why the operand length should be stored in the operand stack with the operand and not outside of the operand stack, separate from the operands, thereby teaching away from a combination with storing operand lengths separate from the operands in the operand stack. Other prior art has taught storing operands in the operand stack and operand length separate from the operand stack, but not storing the length in a table and referencing the table via a separate type memory. Prior art that teaches using tables to store data does not specifically teach storing length information stored separately from its associated data nor does it provide a reasons to combine that overcome statements that essentially teach away from the storing the length information separately in a table referenced by type information.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
